Claims 1, 6-8, 18-21 are uniquely identify a distinct feature "the interconnection controller is configured to compute a cyclic redundancy code value based only on the high-speed link packet and configure to encode the cyclic redundancy code value in the high-speed link packet". Claim 10 further uniquely identify a distinct feature "the transceiver is configured to encapsulate both an intra-cluster packet and an ACK packet in a single high-speed link packet". And claim 11 further identify a distinct feature "the transceiver is configured to form high-speed link packets having lengths that are integral multiples of 96 bits" and in combination with other limitations as set forth in the independent claims. Claims 3-5, 9, and 12-17 are allowed due to dependent claims.

Examiner interprets the limitation "computer-readable medium" as a device that stores computer instructions and participates in providing the computer instructions to a computer processor for execution.
